Fatal Work Injuries in Minnesota — 2017

Fatal work injuries totaled 101 in 2017 for Minnesota, the U.S. Bureau of Labor Statistics reported today. Assistant Commissioner for Regional Operations Charlene Peiffer noted that the number of work-related fatalities in Minnesota increased from 92 in the previous year. Fatal occupational injuries in the state have ranged from a high of 113 in 1993 to a low of 60 in 2011. (See [chart 1](#).)

Nationwide, a total of 5,147 fatal work injuries were recorded in 2017, down slightly from the 5,190 fatal injuries reported in 2016, according to the results from the Census of Fatal Occupational Injuries (CFOI) program.

Chart 1. Total fatal occupational injuries, Minnesota, 2008–2017

SOURCE: U.S. Bureau of Labor Statistics.

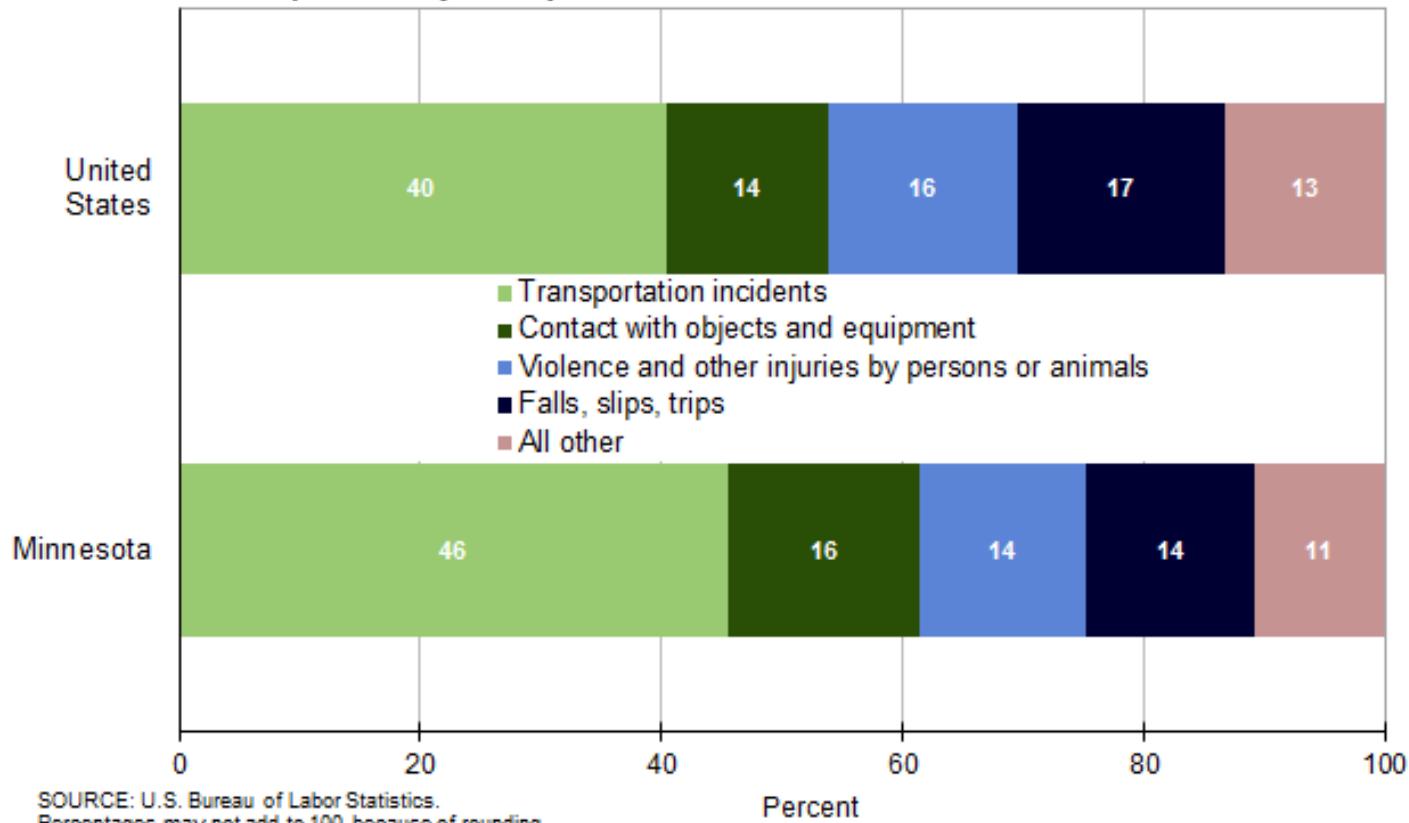

Type of incident

In Minnesota, transportation incidents resulted in 46 fatal work injuries and contact with objects or equipment accounted for 16 fatalities. (See [table 1](#).) The number of worker deaths from transportation incidents was unchanged from the previous year, while worker fatalities due to contact with objects or equipment were up from 10 over the year.

Violence and other injuries by persons or animals and falls, slips, or trips each resulted in 14 fatal work events in 2017. The number of workplace deaths due to violence and other injuries by persons or animals increased by four over the year while the number of worker deaths as a result of falls, slips, or trips was up by three compared to 2016.

Nationally, transportation incidents were the most frequent fatal workplace event in 2017, accounting for 40 percent of fatal work injuries. (See [chart 2](#).) Falls, slips, or trips was the second-most frequent type of event (17 percent), followed by violence and other injuries by persons or animals (16 percent) and contact with objects and equipment (14 percent).

Chart 2. Fatal occupational injuries by selected event, United States and Minnesota, 2017

Industry

The private agriculture, forestry, fishing, and hunting industry had the largest number of fatal work injuries in Minnesota with 23, unchanged from the previous year. (See [table 2](#).) Transportation incidents were the most frequent fatal event with 12 worker deaths. The animal production and aquaculture sector accounted for 12 of the industry's fatal injuries.

The private retail trade industry had 14 workplace fatalities, up 9 from the previous year. Transportation incidents were the most frequent fatal event with eight worker deaths. Motor vehicle and parts dealers accounted for five of the fatal work injuries and food and beverage stores accounted for three of the workplace fatalities in the retail trade industry.

Occupation

The management occupational group and the transportation and material moving occupational group had the highest number of work-related fatalities with 18 each. (See [table 3](#).) Farmers, ranchers, and other agricultural managers accounted for 15 of the management occupational fatalities; heavy and tractor trailer truck drivers suffered nine of the work-related deaths within the transportation and material moving group. The installation,

maintenance, and repair occupational group had the next highest number of fatalities with 13, followed by construction and extraction occupations with 12. Vehicle and mobile equipment mechanics, installers, and repairers suffered nine of the installation, maintenance, and repair occupational fatalities; construction trades workers accounted for 8 of the 12 fatalities within the construction and extraction group.

Additional highlights

- Men accounted for 88 percent of the work-related fatalities in Minnesota, compared to the 93-percent national share. (See [table 4](#).) Transportation incidents made up 45 percent of the fatalities for men in Minnesota.
- White non-Hispanics accounted for 89 percent of those who died from a workplace injury. Nationwide, this group accounted for 67 percent of work-related deaths.
- Workers 25-54 years old accounted for 39 percent of the state's work-related fatalities in 2017, compared to 55 percent of on-the-job fatalities nationally.
- Of the 101 fatally-injured workers in Minnesota, 65 percent worked for wages and salaries; the remainder were self-employed. The most frequent fatal event for both groups of workers was transportation incidents.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries (CFOI), part of the BLS Occupational Safety and Health Statistics (OSHS) program, compiles a count of all fatal work injuries occurring in the U.S. during the calendar year. The CFOI program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This ensures counts are as complete and accurate as possible. For the 2017 national data, over 23,400 unique source documents were reviewed as part of the data collection process. For technical information and definitions for CFOI, please go to the BLS Handbook of Methods on the BLS website at www.bls.gov/opub/hom/cfoi/home.htm.

Federal/State agency coverage. The CFOI includes data for all fatal work injuries, even those that may be outside the scope of other agencies or regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency. More on the scope of CFOI can be found at www.bls.gov/iif/cfoiscope.htm and www.bls.gov/opub/hom/cfoi/concepts.htm.

Acknowledgments. BLS thanks the Minnesota Department of Labor and Industry for their efforts in collecting accurate, comprehensive, and useful data on fatal work injuries. BLS also appreciates the efforts of all federal, state, local, and private sector entities that provided source documents used to identify fatal work injuries. Among these agencies are the Occupational Safety and Health Administration; the National Transportation Safety Board; the U.S. Coast Guard; the Mine Safety and Health Administration; the Office of Workers' Compensation Programs (Federal Employees' Compensation and Longshore and Harbor Workers' Compensation divisions); the Federal Railroad Administration; the National Highway Traffic Safety Administration; state vital statistics registrars, coroners, and medical examiners; state departments of health, labor, and industrial relations and workers' compensation agencies; state and local police departments; and state farm bureaus.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Table 1. Fatal occupational injuries by event or exposure, Minnesota, 2016–17

Event or exposure ⁽¹⁾	2016	2017	
	Number	Number	Percent
Total	92	101	100
Violence and other injuries by persons or animals	10	14	14

Falls on same level	3	4	4
Falls to lower level	8	10	10
Other fall to lower level	7	9	9
Other fall to lower level 6 to 10 feet	--	4	4
Other fall to lower level more than 30 feet	--	1	1
Exposure to harmful substances or environments	12	5	5
Exposure to electricity	--	3	3
Contact with objects and equipment	10	16	16
Struck by object or equipment	6	8	8
Struck by powered vehicle--nontransport	1	4	4
Struck by powered vehicle tipping over--nontransport	--	1	1
Caught in or compressed by equipment or objects	1	4	4
Caught in running equipment or machinery	1	3	3
Struck, caught, or crushed in collapsing structure, equipment, or material	3	3	3
Struck, caught, or crushed in other collapsing structure or equipment	--	1	1

Note: See footnotes at end of table.

Footnotes:

(1) Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

NOTE: Data for all years are final. Totals for major categories may include subcategories not shown separately. Percentages may not add to totals because of rounding. CFOI fatality counts exclude illness-related deaths unless precipitated by an injury event. Dashes indicate no data reported or data that do not meet publication criteria.
